

## TECHNICAL SPECIFICATIONS AND BASIC CHARACTERISTICS

### KA-17 Selfloading rifle with folding/fixed stock cal. 7,62x39mm

**Main Characteristics:** The KA-17, it is an modern selfloading rifle nowadays under production in Slovakia (EU) as a modernized and improved version of original AKMS (Kalashnikov modernized automatic rifle with a fixed or folding stock) using the 7.62×39mm cartridge whereby the gun has been designed originally by Mikhail Kalashnikov. It is a redesigned and modernized variant of the AKMS rifle and the production is carried out in Slovakia Arms plant. The KA-17 is optionally equipped also with a Picatinny rails. It is gas operated with a rotating bolt mechanism. The KA-17 is firing single shots. Comes supplied with a different accessory kit which usually contains modernized steel or plastic magazines with capacity 30-round of light sheet-metal or plastic body weighing only 0.33 kg empty, cleaning set, textile magazine carrying bag and shoulder strap. The KA-17 rifle is equipped with an under folding metal or plastic (optional) shoulder stock in place of the fixed wooden stock. To increase the weapon's accuracy during automatic fire, the KA-17 is fitted with a slant cut muzzle brake that helps redirect expanding propellant gases upward and to the right during firing.
